

Sustainable alternatives to a Global problem

The materials used for the manufacture of signs and graphics have developed and work very well. We don't need to re-invent the wheel, just change the products used to turn it.

Responsibility

Source - Manufacture - Package - Delivery - Waste/Recycle

Single use Plastic, PVC and Foam based signs and graphics are produced daily throughout the UK and due to a lack of control up to 80% will end up in landfill.

Paul Foote Ink is changing this process by looking at the chain from the first link to the last.

We take care in the selection of our material suppliers to ensure they uphold their sustainable principles.

Finding new alternative recyclable raw materials is paramount and achievable.

ECODISPLAY stands

We design and produce in-house bespoke display stands created from card and paper. All our products are 100% recyclable and re-usable.

Our Journey

Source

All our material suppliers are committed to their carbon footprint, using recycled paper, card and plastic as packaging with most of these sourced from FSC certified suppliers.

Manufacture

We are looking at all our products to see how we can ensure each finished project has the maximum environmental impact in every aspect of manufacture.

Our range of card and eco friendly displays are fully recyclable and reusable. We also offer storage for clients and hire of second hand boards and stands.

Package - Delivery

Wherever possible we re-use all packaging materials from the suppliers of the core materials used in our products when sent out for deliveries. The carrier that we use has this policy-

'We've taken a global, enterprise-wide approach to reducing greenhouse gas emissions - from our fleets to our facilities. Our optimised network is a single integrated system that handles all our services, creating powerful connections between our company, our partners and the planet.'

CORO board

Alternative to foamboard and display boards. Fully recyclable rigid product made from 100% paper.

EXFOAM board

Rigid pvc board faced with white recycled paper liners and is ideal for display boards. Produced from 90% recycled pvc. Low flammability and self-extinguishing.

ECOMPOSITE board

The most popular sign material is produced from thin aluminium sheets sandwiching a polyethylene core. Fully recyclable.

ECOFLUTE sheet

Incorporating an absolute minimum of 30% post - industrial and post - consumer waste. Still with all the looks and characteristics of standard Correx.

ECOPRINT paper

Large format printing is now available using poster paper and also available with an acrylic based adhesive. Both versions are 100% recyclable.

ECOPRINT vinyl

Large format printing is now available using a PVC FREE alternative with an acrylic based adhesive. Ecoprint vinyl is 100% recyclable.

ECO CUT vinyl

Our PVC and PLASTICIZER FREE polyolefin-based coloured films have also a water based permanent acrylic adhesive.

CASTACRYLIC sheet

We can now offer a 100% recycled and 100% recyclable cast acrylic sheet.

ECOBANNERS

Fully recyclable and PVC free, our banners are produced using a Polypropylene material which conforms to Plastics Recycling Code 5.

SOLAR65 window film

Heat controlling window film. High TSR of 65%, with 99% of harmful UV rejected and 94% of Infrared rejected.
